1	Introduciton to Functional Testing
2	Introduction to Test Levels
3	Test Types
4	Test Plan
5	Test Design and development
6	Write Test Cases
7	Test Data
8	Expore JIRA
9	Test Execution
10	Defect Life Cycle
11	Defect tracking
12	Reviews
13	Recap

<i>Topic Objective</i>
What and Why of Software Testing. Importance of s/w testing with examples of how much impactful it is to business in the digital world, to cost.
Provide a view of how testing is being performed at different levels (unit, system, system integration, UAT)
Choice of black, white box \with functional and non-functional testing
A walk through of pre-defined plan with emphasis on main sections that provide clarity to the testing project or program
Overview of test design, types of test scenarios, need of RTM, Test case development techniques - Boundary Value Analysis, Equivalence Partitioning, Decision Table. Walkthrough on sample test cases along with hands on test scenarios and test case writing for BRISK app flow.
Write test cases for test scenarios
Importance of test data in test design with example of test data and incorporate test data into JIRA / ALM
A walk thru of features that is necessary to perform BRISK based hands on.
Execute test cases written in JIRA
Introduce and walk thru defect stages and life cycle
Log, track and close the defects for failed TCs
Why reviews? Use of checklists. Peer review hands on with the TCs written
Test Summry report walkthrough, issues encounter and lesson learnt, Defect Causal Analysis
Any queries in STLC
